

Identifying the Tropics, Middle Latitudes, and the Polar Areas

Directions: Approximate on the map where the lines that represent the Equator, the Tropic of Cancer and Capricorn, and the Arctic and Antarctic Circle and place dotted lines where they would be. Also, place the appropriate degrees of the line on the right side of the line. Then shade the landmasses that would be the area of the tropics red, the middle latitudes blue, and the high latitudes light green.
